# Internet Explorer Font Security Setting

(A troubleshooting step-by-step guide for course display issues related to
MS Internet Explorer font security settings)

If your browser is not displaying some of the fonts or buttons properly, the following steps will override some font restrictions that were added to MS Internet Explorer versions 11+. Please consult your local Administrator, or IT Professional, to ensure you are in compliance with local directives and rules before changing these settings.
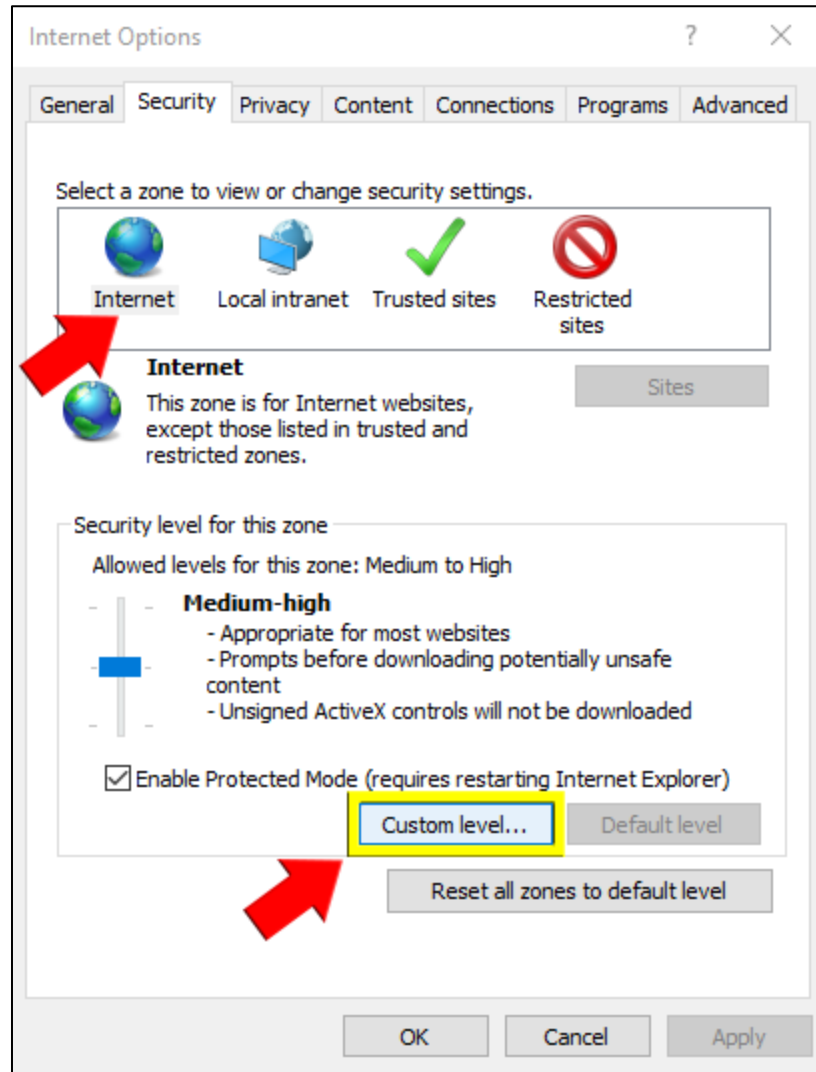

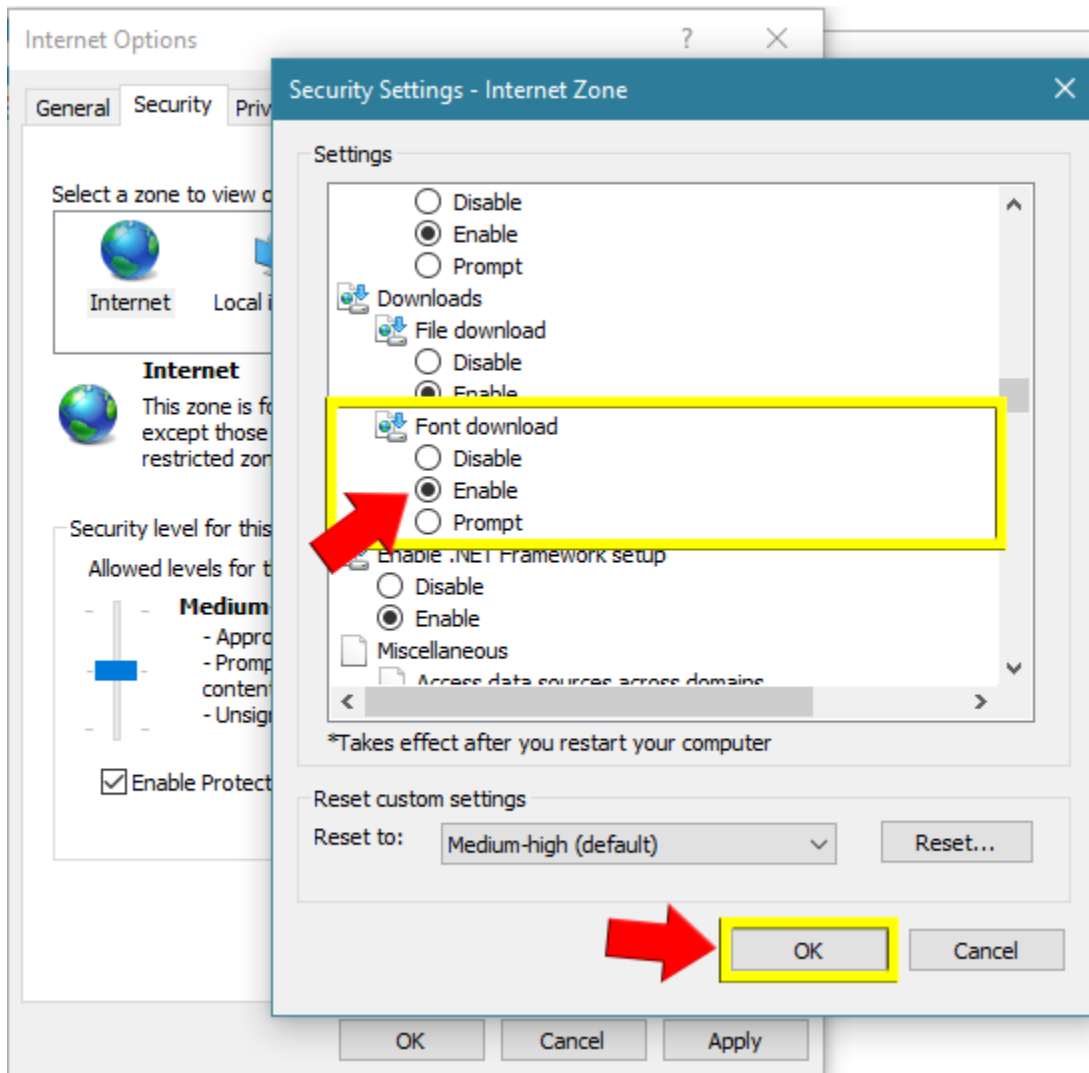

1. From the Tools menu, select **Internet options**.

2.   Then select the **Security** tab.

3.   With the **Internet** zone selected, click the **Custom level…** button.

4.   Scroll through the settings to find the Font download setting, and click the radio button next to **Enable**. Select **OK** to close the Security Settings - Internet Zone options window.

5.   Finally, click **OK** again to close the Internet Options window.
